

March 29, 2022

The Honorable Jeff Merkley
Chairman
Interior, Environment, and Related Agencies
Subcommittee
Senate Appropriations Committee
United States Senate
Washington, DC 20510

The Honorable Lisa Murkowski
Ranking Member
Interior, Environment, and Related Agencies
Subcommittee
Senate Appropriations Committee
United States Senate
Washington, DC 20510

The Honorable Chellie Pingree
Chairwoman
Interior, Environment, and Related Agencies
Subcommittee
House Appropriations Committee
United States House of Representatives
Washington, DC 20515

The Honorable David Joyce
Ranking Member
Interior, Environment, and Related Agencies
Subcommittee
House Appropriations Committee
United States House of Representatives
Washington, DC 20515

Dear Chairman Merkley, Chairwoman Pingree and Ranking Members Murkowski and Joyce:

We write to thank you for providing fiscal year (FY) 2021 funding totaling \$55 million for the modernization of the US Geological Survey (USGS) National Wildlife Health Center (NWHC) located in Madison, Wisconsin. The NWHC is unique because it is the only national center dedicated to wildlife disease detection, control, and prevention throughout the United States. Although NWHC did not receive additional direct funding to implement the full modernization in FY 2022, we hope to work with the Subcommittee to secure the **remaining \$82 million (adjusted for inflation at 7%) in no-year funding for FY 2023. Securing the remaining funding in FY2023 would be least disruptive option and would ensure that the overall construction remains on budget.**

The NWHC is the nation's only federal BSL-3 facility exclusively dedicated to scientific investigation and research on wildlife diseases that threaten human, animal, and environmental health. Through a comprehensive program involving biomedical and ecological expertise and capabilities, the NWHC is a world leader in developing science-based solutions to some of the most deadly wildlife diseases including avian influenza, white nose syndrome of bats, and other emerging diseases that have devastated wildlife populations around the world and pose significant threats to our food supply and public health. For example, in 2014 the NWHC was the first to detect the Asian strain of highly pathogenic avian influenza in waterfowl in the United States - providing important early warning for the commercial poultry industry.

The National Wildlife Health Center is making progress on the modernization plans, and is expecting to award a contract for the building design and environmental assessment in the spring or summer of 2022. The NWHC continues to deliver impactful science on emerging diseases; for example, the Center produced rapid assessments of the risk of SARS-CoV-2 transmission from humans to wildlife that were instrumental in the development of interventions to protect people and wildlife populations. The Center has also performed studies to elucidate the range of species that are susceptible to SARS-CoV-2 and is conducting national surveillance for SARS-CoV-2 in free-ranging wildlife. The Center is also part of the federal interagency response to the recent detection of highly pathogenic avian influenza in North America and is conducting surveillance for avian influenza viruses in wild birds for early detection of threats to commercial poultry and endangered species.

The NWHC consists of approximately 65,000 square feet of offices, common areas, and Biosafety Level Three (BSL-3) laboratories and animal holding facilities that are uniquely designed for wildlife species. The current facilities are 40-50 years old, and have been well maintained, but are now in need of life-cycle replacement. Importantly, without adequate funding for upgrades, the Center may not be able to meet future standards for the operation of high biocontainment facilities.

The NWHC studied various approaches to modernization, including the business case analyses to explore the most feasible, cost-effective, and least disruptive option for modernization. These options included comparing renovation versus new construction, owned versus leased facilities, and options for relocation. **Based on these analyses, NWHC determined that new construction on the current site is the most cost-effective option that minimizes disruption to continuity of operations.**

The analyses indicate approximately \$141 million total is needed for new construction on the current site completed in one single phase with maximum efficiencies. This is the most cost-effective approach to the modernization. **Therefore, our organizations request the Subcommittee provides \$82 million in no-year funding in the FY 2023 spending bill to allow NWHC to implement modernization in the most cost-effective manner, at a one-time cost.**

We feel strongly that NWHC has judiciously studied various approaches to identify the most economical path. As we've learned throughout the COVID-19 pandemic, preparedness investments made by the Subcommittee today yield incredible savings compared to the cost of a high consequence disease outbreak. The last avian influenza outbreak in Midwest poultry farms resulted in approximately \$3 billion of economic losses. The costs of the COVID-19 pandemic will be measured in trillions of dollars.

Thank you for your consideration of this situation as the Subcommittee considers 2023 funding. Our organizations look forward to working with you and your staff on this important issue. Please do not hesitate to contact Kevin Hartley with the American Veterinary Medical Association at khartley@avma.org should you have any questions. Thank you again for your consideration.

Sincerely,
