

United States Department of Agriculture  
National Agricultural Statistics Service  
Nebraska Field Office

April 11, 2025

Dear Producer:

For more than 50 years, the Objective Yield Survey has played an integral part in U.S. crop production forecasts. USDA's National Agricultural Statistics Service (NASS) combines field measurements with farmer-reported survey data to publish monthly crop production estimates.

**Why am I getting this letter?**

The Wheat Objective Yield Survey will begin in late May. Prior to the survey, a NASS representative will call you and other selected producers to verify crop acreage reported on previous NASS surveys. The initial call will take 15 to 25 minutes of your time. With your permission, we will then enter your field(s) at the end of each month during the growing season to collect plant and fruit counts and measurements. Monthly follow-up visits, if needed, will not require your time or personal contact.

Information from the Objective Yield Survey will help you and other American farmers make informed business decisions on your operations.

**How will the data be used?**

This survey is a crucial tool for estimating wheat yield and production in the United States. All sectors of the agricultural industry rely on NASS yield and production estimates to help make sound business decisions. NASS publishes the findings for wheat each month, May through August, in the monthly *Crop Production* report.

Thank you in advance for your support of our programs and Nebraska agriculture. If you have any questions or concerns, please contact me at (800) 582-6443.

Sincerely,

A handwritten signature in blue ink that reads "Nicholas Streff".
